Physiotherapist

## RELIABLE & SCIENTIFICALLY PROVEN

<https://www.mdpi.com/1424-8220/21/17/5972>

An innovative tool designed with Physiotherapists that assist treatment protocol and monitoring of rehabilitation with objective measurements of walking and running.

## FAST

In less than three minutes, a patient's walking movements are acquired into the system allowing physiotherapists to go further and more effectively in their treatment protocols.

## PORTABLE AND EASY-TO-USE

Digitsole Pro's web interface allows it to be used anywhere - in office, at home, or outdoors.

### RESULTS

Collect and view biomechanical data that may improve the diagnostic; help to personalize treatment protocols and communicate with patients, family and health professionals.

### PERSONALIZE THE TREATMENT PROTOCOL

Through data from walking and running, refine the treatment protocol and ensure patient compliance.

### MONITOR

The evolution of rehabilitation. Visualize the effectiveness of the treatment and readjust if necessary.

The patient sees his results, understands his treatment, and the goals to be achieved.  
For which patients? All - rehabilitation, performance, sports recovery, injury prevention, reference
