

Body Armor[®] Night Splint

Dorsal Night Splint

The DARCO Body Armor[®] Night Splint is the only night splint that actively engages the windlass mechanism of the foot, resulting in a specific and sustained stretch to the plantar fascia and a sustained low load stretch to the flexor tendons, Achilles tendon and calf muscles.

DARCO

Body Armor® Night Splint Features and Benefits:

- › **Toe Strap** dorsiflexes the 1st MPJ to provide a specific and sustained stretch to the Plantar Fascia and a sustained low load stretch to the flexor tendons, Achilles tendon and calf muscles.
- › **Loading the Windlass Mechanism** naturally brings the foot/ankle to a near 90 degree angle thus eliminating the “lever effect” and the resulting pressure on the apex of the ankle present in other dorsal models.
- › **Elastic Connector Ring** allows for natural flexion of the foot and toes during sleep and gently returns the foot to the dorsiflexed position as muscles relax.
- › **Low Profile Design** allows for maximum user comfort and compliance.
- › **One-size-fits-all** means reduced inventory and ensures that the right size is always on hand.

Body Armor® Night Splint Indications:

- › Plantar Fasciitis
- › Heel Spurs
- › Achilles Tendonitis
- › Achilles Tendinosis
- › Metatarsalgia
- › Ankle Contracture
