

## analog dynamometers for use with your existing software

### 300 lb hand dynamometer

### 100 lb pinch gauge

### 500 lb wrist dynamometer

### 500 lb push-pull dynamometer

- each dynamometer contains a transducer that generates an analog electronic signal; dynamometer does not produce digital signal
- the analog signal must be converted to a digital signal to be read by your computer software
- your in-house tech can do this with an A to D converter
- read information from your dynamometer dial face or directly on your computer with appropriate application software (not provided)
- computer compatible dynamometers are available in 2 styles:
  - 1) dial gauge with analog output
  - 2) analog output only

- Dual output: dial gauge with analog signal (see A)
- Single output: analog signal only (see B)
